

# PAIR PROGRAMMING IN GIT

A command-line tool for social coding

Includes co-authors in commits when you collaborate on code. Use when pairing with a buddy or mobbing with your team.

Read our blog post to find out why git-mob exists: [Co-author commits with Git Mob](#)

[New Git Mob VS Code extension](#)

```
102 ## Try Git Mob
103
104 Take a look at our [Git Mob workflow]
105 (https://github.com/findmypast-oss/git-mob#workflow--usage) on how to use.
106 Please try [Git Mob](https://www.npmjs.com/package/git-mob) and let us
107 know what you think.
108 The project is still in its early stages and might have bugs or lack some
109

```

- If you will code in pairs for the class project, try configuring git by acknowledging your pair programmer
- <https://github.com/findmypast-oss/git-mob>
- <https://github.com/augustohp/git-pair>

## git-pair build passing

Simple bash-script allowing pair to be identified on git commits:

```
$ git pair "Nelson Senna"
```

From now on, your commits will be identified with authors like:

```
commit a101286e02117fdafea58742074694138d578948
Author: Augusto Pascutti + Nelson Senna <augusto@phpsp.org.br>
Date: Thu Sep 3 23:00:58 2015 -0300
```
